FAHRENHEAT®

PLF Hydronic Electric Baseboard Heaters

THE HYDRONIC STORY:

The electric heating element is partially submerged in an inert heat transfer fluid totally sealed in a large 7/8" diameter copper tube spanning the length of the heater. This thermal mass transfers heat evenly across the entire length of the heater. The PLF series provides uniform warmth with longer heat retention and minimal temperature variation.
For optimum performance, use a wall mounted digital thermostat to maintain comfortable room temperature.
