3. Determine which knockout in back box will be used for field wiring and remove (See fig. 1). Install strain relief (field supplied).

NOTE: If top, bottom, or right end knockouts are used for field wiring, a mating hole or slot will have to be punched in surface mounting frame. If field wiring enters box through the back or if field wiring exits wall next to right end of back box, no mating hole or slot in surface mounting frame is required.

5. Mount the surface mounting frame by positioning frame on back box and pushing back to wall . As the frame goes over the back box, four tabs will bend out to provide a friction fit that holds frame in position for the balance of the installation.
